## 1) Algorithm

- \* CPU scheduling algorithm are used for scheduling different process present in the ready queue with available resource in an optimal way so that each and every process get execute by CPU
- \* Scheduling algorithm are broadly classified into two main type namely preemptive and non-preemptive .
- \* FIRST COME FIRST OUT(FCFS) is also know as FIRST IN FIRST OUT (FIFO) SCHEDUAL algorithm is theand simplest CPU
- \* A process scheduling different process to be assigned to the CPU based on particular scheduling algorithm thereare six popular process scheduling algorithm which we are going to discuss in this chapter FIRST COME FIRST OUT SCHEDULING

**EXAMPLE 1:** Consider the following example containing five process arrive at same time.

Process ID	Times new
P0	6

P3	3
P4	4

**SOLVE:**

**Step 1:** Process get execute according to their arrival time.

**Step 2:** Following show the scheduling and execute of process .

**Step 2.2:** At start p0 arrive and get execute for 6 second.

System time	0
Process Scheduled	P0
Turn around time	6-0=6
Wating Time	6-6=0

**Step 2.2:** p1 arrive after completion of p0 , p1 is execute for 3.
